

AquaFinesse Mineral Salt Instructions

Startup procedure for HydroPool Hot Tubs.

---Add 5-caps of Spa Control *while filling* your spa. Once filled, turn on power, run pumps on full and set temperature.

---Put one chlorine tab in the floater or chlorine dispenser.

---Balance **Total Alkalinity** to 125-150, then balance **pH** to 7.5.

---Once Heated, check for sandpaper finish on the acrylic. If surface is rough, clean thoroughly with rag or sponge. Add your first dosage of AquaFinesse, **see Chart below for amount.**

***If spa is NOT equipped with a 24 hour circulation pump, set filter cycle for minimum 8 hours filtration per day. (4 hours morning, 4 hours evening)

Weekly Maintenance

---Add regular dosage of AquaFinesse on the same week day. **See Chart below for amount.**

---Use test strips to check balance of **Total Alkalinity**, **pH**, and **chlorine**. ***OR*** Bring a water sample into us at the store to have it tested.

---Maintain **2-3 PPM** (Parts per million) of chlorine in the water at all times. On average 2 chlorine tabs will be used per week. **IF TABS ARE NOT ENOUGH TO MAINTAIN CHLORINE LEVELS, SUPPLEMENT WITH GRANULAR CHLORINE. If adding granular chlorine, use doses of 1 teaspoon per 30 minutes.**

---Rinse Filters with good pressure at least once per week. Soak filters in cleaning solution (liquid, tablets or spray) every 6-8 weeks.

***If bather load is greater than 2 hours weekly, additional granular chlorine may be required. Typically ½ to 1 teaspoon is sufficient.

Regular Maintenance and Useful Recommendations

***It is recommended to drain and fill when switching to AquaFinesse to achieve optimum cleaning performance and to clean out existing Biofilm and calcium build-up.

***As AquaFinesse starts the cleaning process of eliminating build-up, you will need to rinse your filter with good pressure at least 2 times per week for the first few weeks of use. De-calcify your filters using AquaFinesse Filter Cleaning Tabs after the first few weeks of operation.

***Maintain Total Alkalinity between 125-150 and pH between 7.4-7.6.

***Watch for sticky yellow foam on the waterline. If water turns foamy, yellow, green or smelly; check chlorine levels and boost with granular chlorine if necessary. Make sure your filters are clean, and add Phosphate removing chemicals. A non-chlorine shock may also be used (Spa Shock).

***If water turns cloudy, rinse and/or soak filters more often, a clarifier may also be used to rectify this issue. (Spa Clear)

***Have water tested once a month

Enjoy your spa!

Hot Tub Model	AquaFinesse Amount
Self Clean 395 + Serenity 4000	180ml
Self Clean 495, 570, 670 + Serenity 5000, SE5	200ml
